

Does Sexual Identity Development Matter for HIV Prevention with Sexual Minority Youth?

Colleen Tracey-Fisher, MSW, PhD
School of Social Work
University of Minnesota, Twin Cities

November 6, 2007

Sexual Identity Development (SID) in Sexual Minority Youth

- Developmental milestones
 - Timing/sequence/context
 - 1st same-sex attraction
 - 1st same-sex sexual contact
 - 1st self-label
 - 1st disclosure

- Attitudes, stress, perceptions
 - Gay-related stressful life events
 - Involvement & connection w/LBGT community
 - Attitudes toward LBGT people, homosexuality

Sexual Identity Development (SID) in Sexual Minority Youth

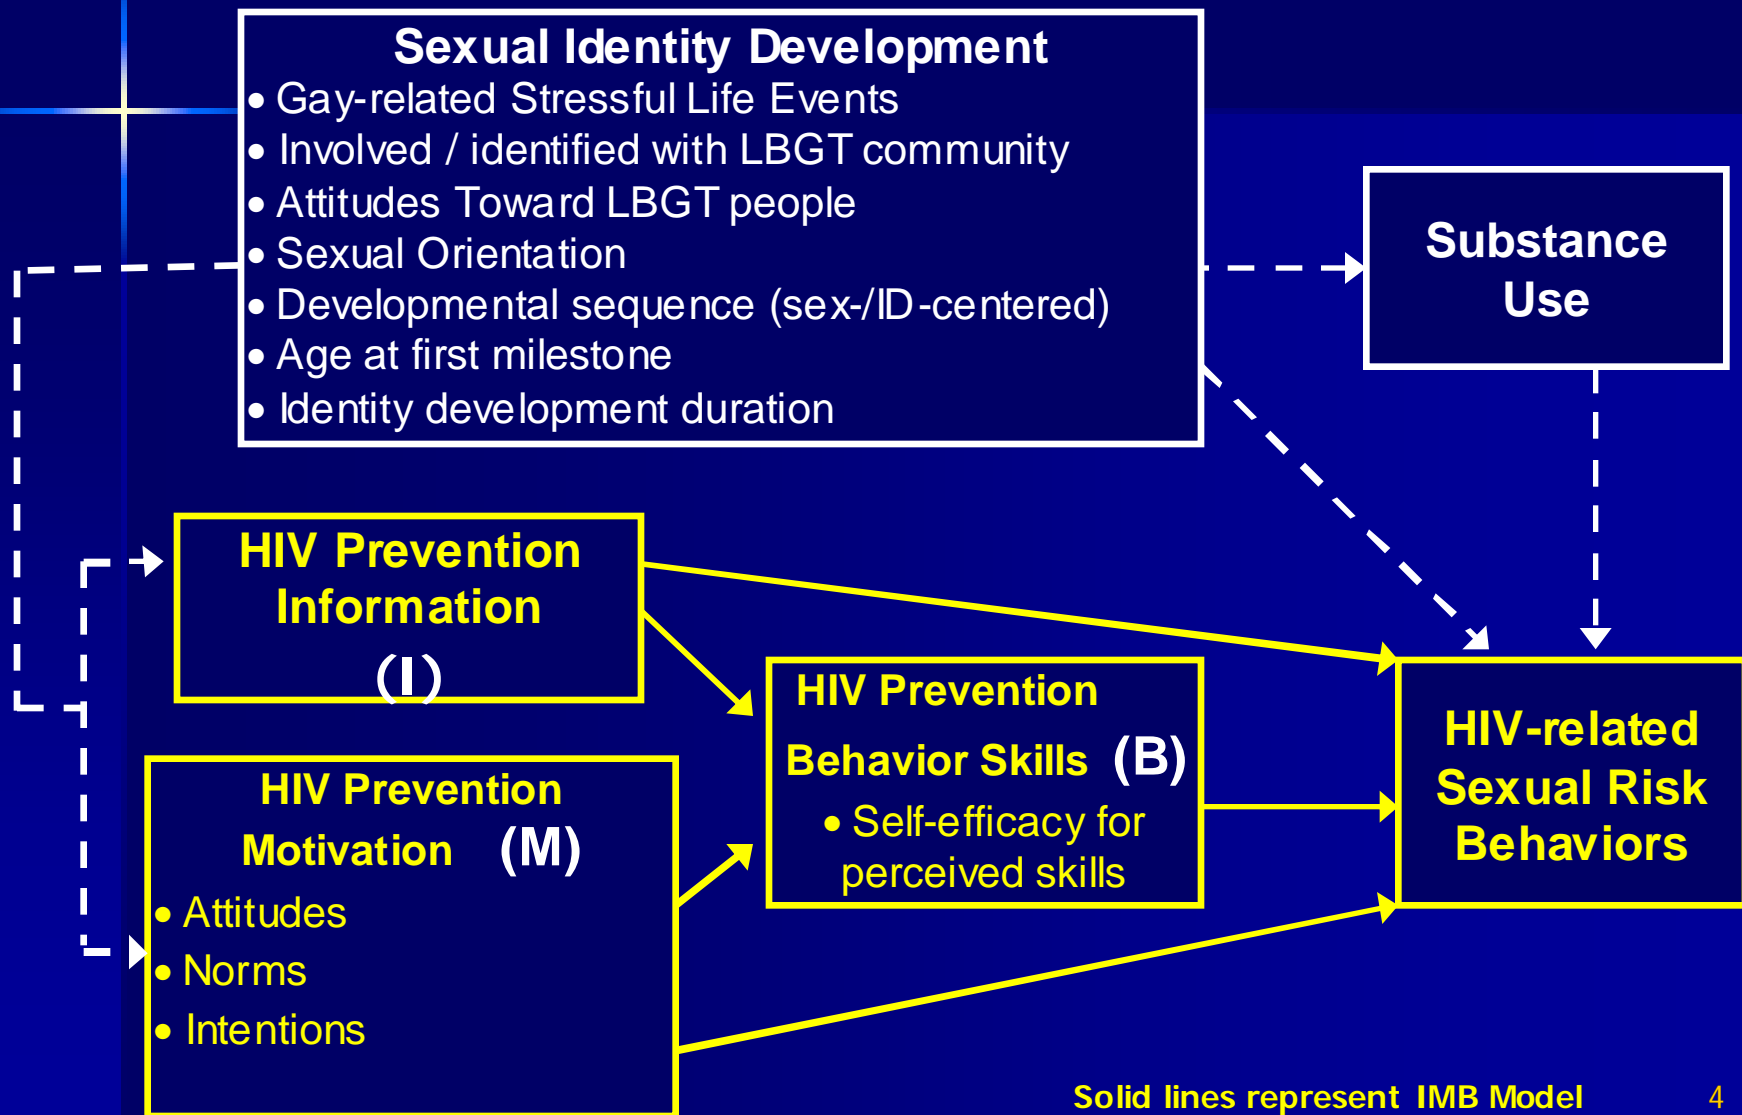

■ We know

- Timing/sequence/context of milestones associated with
 - Victimization experiences
 - Mental health outcomes
- LBGT-related attitudes & experiences associated with
 - Substance use
 - Mental health outcomes

■ We need to know more

- Impact of sexual identity development characteristics & experiences on the SRB of YMSM

Theoretical Framework

Key Research Question

To what extent does the extended model predict HIV-related sexual risk for sexual minority males compared to the original IMB model?

METHODS

Measures: IMB

■ Information

- AIDS Information Heuristics subscale (9 Likert-type items; $\alpha = 0.75$)

■ Motivation

- Attitudes (3 Likert-type items; $\alpha = .69$)
- Friend Norms (3 Likert-type items; $\alpha = .73$)
- Partner Norms (3 Likert-type items; $\alpha = .76$)
- Intentions (3 Likert-type items; $\alpha = .76$)
- Perceived vulnerability (3 Likert-type items; $\alpha = .54$)

■ Skills Self-Efficacy

- Condom Use Self-efficacy (3 Likert-type items; $\alpha = .83$)
- Safer-sex Negotiation Self-efficacy (5 Likert-type items; $\alpha = .72$)

Measures: Substance Use

- Ever used substance
 - *10 yes/no items*
- Fx of substance use
 - *10 Likert-type items*
- Substances
 - Tobacco, alcohol, marijuana, ecstasy, methamphetamines, inhalants, stimulants, cocaine, heroin, steroids

Key Measures: SID

- SID Milestones
 - 11 items about 6 milestone events (*age, context*)
- Sexual Orientation
 - 2 7-point Likert-type items ($\alpha = .93$)
- Attitudes Toward LBGT people
 - 5 Likert-type items ($\alpha = .72$)
- Gay-Related Stressful Life Events
 - 12 yes/no items ($\alpha = .80$)
- Involvement/Connection with LBGT Community
 - 8 Likert-type items ($\alpha = .77$)

Key Measures: SRB

■ Primary SRB Scale

- Ever had vaginal/anal sex (lifetime)
- Had vaginal/anal sex (last 2 mo.)
- Frequency of condom use for vaginal sex (last 2 mo.)
- Frequency of condom use for anal sex (last 2 mo.)
- Frequency of unprotected sex (last partner)

■ Secondary SRB Scale

- Sex under influence (last 2 mo.)
- Used drugs to improve sex (last 2 mo.)
- Freq of discuss safer sex w/vaginal partner (last 2 mo.)
- Freq of discuss safer sex w/anal partner (last 2 mo.)

Research Setting & Data Collection Procedures

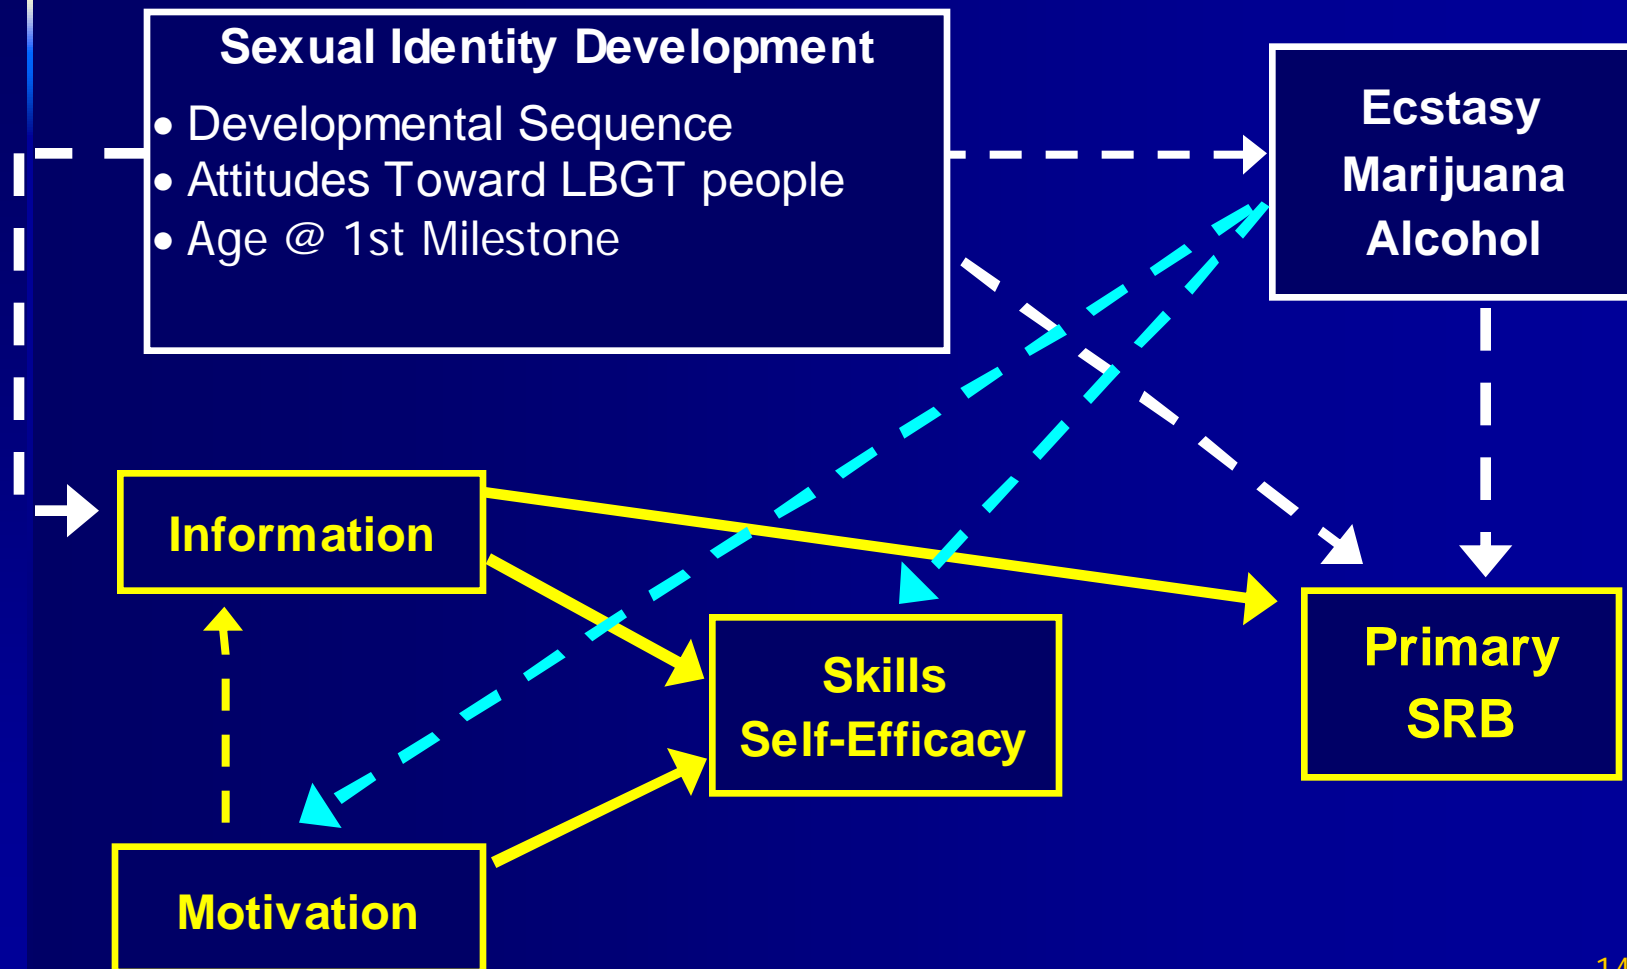

- LBG Community Center in Detroit
 - Youth drop-in social program on Friday & Saturday nights
 - Predominantly African American & Caucasian youth
- Self-administered survey
 - Approximately 25 minutes to complete
 - \$10 participant remuneration

Sample

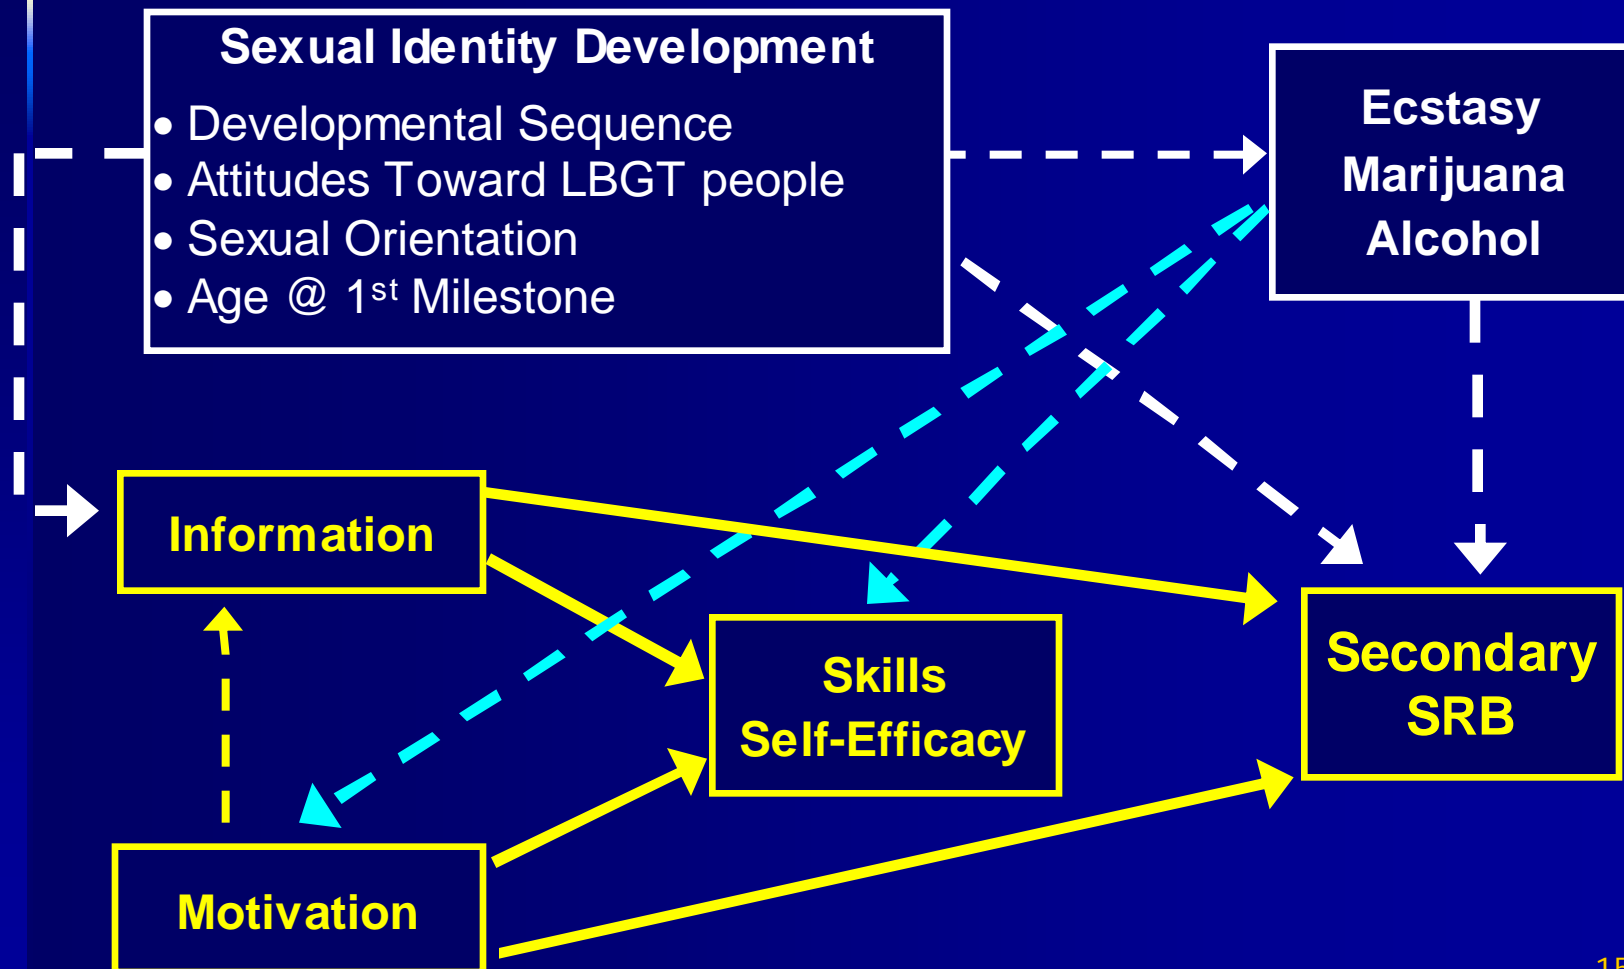

CHARACTERISTICS	n	%
RACE / ETHNICITY		
African American	105	67.31
Caucasian	28	17.95
Non-African American youth of color	23	14.74
GENDER IDENTITY		
Male	144	92.31
Transgender	12	7.69
SEXUAL IDENTITY		
Gay	112	71.79
Bisexual	30	19.23
Other	14	8.97

RESULTS

Path Analysis Results for Primary Sexual Risk

Path Analysis Results for Secondary Sexual Risk

Comparison of Fit of Original IMB & Extended IMB Models

FIT CRITERIA	IMB MODEL		EXTENDED MODEL	
	Primary SRB	Secondary SRB	Primary SRB	Secondary SRB
R ²	.13	.08	.27	.38
χ^2 (df)	3.70 (2; p=.16)	3.15 (2; p=.21)	34.63 (30; p=.26)	45.23 (37; p=.17)
RMSEA	.07 (.00 - .19)	.06 (.00 - .18)	.03 (.00 - .07)	.04 (.00 - .07)
AGFI	.94	.95	.92	.91
PGFI	.20	.20	.52	.53
TLI	.94	.96	.97	.95

Discussion

- Extended model compared to original IMB model
 - More predictive of SRB
 - Applicability of model for racial/ethnic subgroups
 - Potential to improve model by adding
 - Other SID variables
 - Ethnic identity component

Discussion

- Exploration of SID variables
 - Represented in extended model
 - Attitudes
 - Orientation
 - Developmental sequence
 - Age at first milestone
 - Not included
 - Gay-related stressful life events
 - Involve/Identify with LBGT community
 - Developmental duration

Limitations

- Cross-sectional data
 - Limitations on causality & unstructured recall
- Sampling
 - External validity
 - Self-selection bias; internal validity
- Self-report data
 - Memory problems; social desirability bias
- Adapting theoretical models
 - Adapted for sexual minority youth (not YOC)

Implications

■ Research

- Utility of extended model for racial/ethnic subgroups & transgender youth
- Additional SID constructs

■ SID intervention targets for HIV prevention

- Positive attitudes toward LBGT
- Same- & opposite-sex safer behaviors
- Reaching youth prior to first same-sex contact
