Brief History and Background

1960s Generic **Health Alert Notice**

Health Alert Notice

For International Travelers Arriving in the United States

To The Traveler

Keep this card in your wallet or purse 6 weeks. If you become ill during this time, give this card to your physician and tell him/her about your recent travel outside the United States.

You could have been exposed to a communicable disease before arriving in the United States, and knowing about this may be helpful to your physician in making a diagnosis.

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Front

To The Physician

The patient presenting this card has recently been abroad, and could have been exposed to a communicable disease not commonly seen in the United States. If you suspect an unusual infectious disease in this instance (cholera, hemorrhagic fever, malaria. yellow fever, etc.), please report it immediately to your city, county or State Health Officer and also to the Division of Quarantine Centers for Disease Control and Prevention, Atlanta, Georgia 30333 (404-639-8107, nights, Sundays, and holidays 404-639-

The United States is currently trying to eliminate measles. If you suspect measles, please notify your local or State Health Department by telephone on the first available working day. PLEASE DO NOT DELAY REPORTING UNTIL LABORATORY CONFIRMATION.

This is not an insurance ID card.

CDC 75.8 REV. 8-93 (Back)

2006 Measles **Travel Health Alert Notice** (Disease specific)

Travel Health Alert Notice: Measles

To the traveler: You may have been exposed to measles while traveling. Measles is a highly contagious illness transmitted through the air when infected people cough or sneeze.

Symptoms: If you have a fever AND a red, raised rash that usually starts on the face and spreads to the arms, legs, and body; a cough; runny nose; or red eyes-

- · Contact your doctor right away; tell your doctor that you were exposed to measles during your trip and arrange to be seen.
- Show your doctor this card.
- Limit your contact with other people.
- Do not travel, unless you are traveling locally for medical care.
- Cover your nose and mouth with a tissue when you cough or sneeze.
- Wash your hands often, especially after coughing or sneezing.

You are most likely protected if you

- have had measles,
- were born in the United States before 1957, or
- have had 2 doses of measles or MMR vaccine.

If not protected, people at higher risk for serious infection are

- pregnant women,
- persons who have a health condition or medical treatment that affects their immune system.

See "To the doctor" on the other side ...

SAFER . HEALTHIER . PEOPLE TM

Front (large index card size)

Purpose and Process

- 1. Rewrote Measles T-HAN using health literacy/plain language techniques
- 2. Designed three new formats
- 3. Conducted focus group to
 - Gather feedback on new formats
 - Test clarity of health messages
- 4. Reported findings; made recommendations

Plain Language Techniques

- Audience: Consider the reader
 - Wide, diverse, international
 - Some speak English as a second language
 - In a hurry to make other flights
 - Parents of young children
 - Elderly
- Purpose: Consider your goal
 - Alert passengers about possible exposure
 - Give symptoms to monitor
 - Keep card for several days to give to doctor to follow up

Plain Language Techniques, cont.

- Use 3-4 key messages
- Write in clear, concise, and simple language
- Write in active voice directly to the reader
- Group like actions together
- Order text by importance
- Chunk information in short sentences of 8-10 words and short paragraphs with only 3-5 sentences
- Use easy-to-read type, bold-face subheads, bullets, and white space

Focus Group Members

- All traveled internationally
- None worked in public health or in medicine
- Of 6 participants:
 - 5 born in other countries*
 - 5 females
 - 2 non-U.S. citizens
 - 1 spoke English as a second language
 - 2 had high school degrees, 2 had a bachelor's/master's degrees, 2 had doctorates
 - 3 aged 30 to 44 years; 3 were 45 to 59 years
 *Ethnic origins: Ecuador, Jamaica, Japan, Taiwan/China, and Thailand

Focus Group Results: Information Desired

- Name of the disease and its symptoms
- Whether it was contagious and how it was transmitted (airborne?)
- How easy it was to catch (by touch?)
 - Was it a virus?
- The disease in relation to the airplane
 - How safe was the plane's air flow?
 - How near could they sit to ill passenger and be safe?
- How to protect themselves
 - Should they wear a mask and what kind?

Focus Group Results: Utility

- All agreed they would read the card
- All agreed that some kind of personal contact was important to:
 - Make sure they read it
 - Explain its importance
 - Reinforce information
 - Help answer questions
 - Give severity of risk
 - Help people who don't speak English
 - Deal with irritable or angry passengers
 - Explain steps or actions

Focus Group Results: Format 1 – 2006 Measles T-HAN (Current method)

Focus Group Results: Text and Format Format 2 – Half-Page

You may have been exposed to MEASLES. Save this card to find out what you need to do!

Date I arrived in the United States:

If you have NOT had measles or had a vaccine, you are NOT protected. Call your doctor within <u>2 days</u> to find out how to keep from getting sick.

If NOT protected, who can get serious infections?

- · Pregnant women or
- Persons with weak immune systems, such as a transplant recipient, cancer or HIV patient, or a person taking steroids like prednisone.

How do I know if I have measles?

If you have measles, during the next <u>18 days</u> you will get a fever AND a red rash (rash can start on the face and spread to the arms, legs, and body) along with a cough, runny nose, or red eyes.

What should I do if I get sick?

- ✓ Call a doctor right away.
- ✓ Before your visit, tell the doctor about your recent trip, this card, and how you feel.
- ✓ Show the doctor this card.

How do I keep from spreading measles to others?

- When you cough or sneeze, cover your nose and mouth with a tissue. Throw used tissues in a trash can.
- Wash your hands OFTEN with soap and water or use an alcohol-based hand gel.
- ✓ ALWAYS wash your hands after you sneeze or cough.
- ✓ Do not travel, except to go see a doctor.
- ✓ Avoid being around other people.

You may NOT get measles if you:

- Have had measles before.
- · You were born in the United States before 1957, or
- Have had 2 doses of measles vaccine or 2 doses of MMR vaccine.

If you think you may have measles, call a doctor right away. Please take care of your health and help prevent the spread of measles. \rightarrow

A note to the doctor

The patient presenting this card may have been exposed to measles on a recent trip.

- Live virus measles vaccine given within 72 hours of exposure may prevent disease or make the symptoms milder.
- Immune globulin (IG) given up to 6 days of exposure may prevent or lessen the severity of measles. IG is indicated for persons at high risk for complications.
- If your patient has measles, please report the case to your city, county, or state health officer. (See www.astho.org; click on "State Links.")

For more information:

- See the CDC website: <u>www.cdc.gov/nip/diseases/measles</u>
- Contact the CDC Quarantine Station at the patient's port of entry (see below) about this exposure.

Inside pages

Back

Format 4 – Booklet: Comments

"It's like you just put eyeglasses on, it's so clear!"

"It's the best one so far!"

(Unanimous choice)

Findings and Recommendations

- Formats with plain language techniques were preferred
 - Move and change some text
- Booklet (passport size) format was unanimous first choice
 - Redesign T-HANs in this format
- Personal contact will reinforce importance and use
 - Distribute T-HANs with verbal explanation

Limitations of Focus Group

- Small group need to get feedback from more people
- Only one male in group
- Need representatives of younger age group (18–29 years) and older age group (60–75 years)
- May help to pilot test
- Need more speakers of English as a second language
