### Creating Research in the Midst of a Disaster

Phase I: Immediate online baseline assessment of measures of hurricane impact, perceived stress, depression, PTSD, resource loss, resilience, positive growth, physical symptoms, coping, social support, worry, displacement, damage, injury, financial data, health utilization data, employment & work disruption & four biological measures of stress via salivary samples.

---

---

---

---

---

---

---

---

### Planning for the Long Haul – Longitudinal Follow Up

Phase II: Repeated assessment of measures of perceived stress, depression, PTSD, resource loss, resilience, positive growth, physical symptoms, coping, social support, worry and four biological measures of stress at the 12 month and 24 month anniversary of Hurricane Ike.

---

---

---

---

---

---

---

---

### Specific Aims

- Primary Aim 1: Investigate the progression of mental distress across time relative to recovery trajectories found in previous studies of bereavement and traumatic loss to identify predictive factors that discriminate between patterns of recovery in a disaster population.
- Primary Aim 2: Examine the meditational importance of internal and external resource levels and change over time in predicting subsequent levels of psychological distress and changes in distress.

---

---

---

---

---

---

---

---

### Sample

- **UTMB community: Faculty, staff and students**
  - 7th largest employer in the region (13,000 employees statewide)
  - 6 hospitals
  - State's oldest schools of Medicine, Nursing, Health Professions and Biomedical Sciences
  - 2,338 students(2,094 from 122 TX counties), over 700 interns, residents, and fellows, and 1,116 faculty.
- **477 respondents to survey at baseline**
- **115 respondents to survey and salivary donation**

### Evacuation Statistics

Variable	Mean	sd	Min-Max
Age of the participant	47.88	10.93	24-80
How many days were you away	12.09	19.12	0-142
Number of adults responsible for evacuating	1.79	1.63	0-12
Number of children under 18 responsible for evacuating	0.44	.803	0-4
Number of pets responsible for evacuating	1.85	2.67	0-17

### Relationships Between Psychological Measures

	Worry	PTSD Total	PTSD Freq	PTSD Severity	Depression	Hurricane Exposure
Perceived stress	.562**	.680**	.679**	.654**	.792**	.396**
Worry	-	.512**	.503**	.503**	.563**	.126*
PTSD Total		-	-	-	.763**	.410**
PTSD Freq			-	-	.748**	.408**
PTSD Severity				-	.751**	.378**
Depression					-	.249**
Hurricane Exposure						-

---

---

---

---

---

---

---

---

---

---

---

---

### Relationships Between Biological Measures

	IL6	TNFa	EBV	DHEAS	Cortisol	Testosterone	Cort: DHEAS
IL1b	.411**	.491**	ns	ns	ns	.231*	ns
IL6	-	.417**	.206*	ns	ns	ns	ns
TNFa		-	ns	ns	.190+	ns	.173+
EBV			-	ns	ns	ns	ns
DHEAS				-	ns	ns	-
Cortisol					-	ns	-
Testosterone						-	ns
Cortisol: DHEAS							-

---

---

---

---

---

---

---

---

---

---

---

---

### Relationships Between Biological Measures and Psychological Measures

- IL6 correlated with Depression ( $r=.214^*$ ) and marginally with PTSD Severity ( $r=.173$ )
- All other relationships were essentially nonexistent, ( $r<.000$  to  $r=.149$ )

---

---

---

---

---

---

---

---

### Predicting Depression and PTSD Symptoms

Predictors	Depression Partial r	PTSD Partial r
	<b>P<sub>=.000</sub>; R<sup>2</sup><sub>=.733</sub></b>	<b>P<sub>=.000</sub>; R<sup>2</sup><sub>=.659</sub></b>
Perceived stress	.609	ns
Worry	ns	.189 (.063)
PTSD Frequency	.487	-
PTSD Severity	ns	-
Depression	-	.633
Hurricane Exposure	-.179 (.077)	.376
IL1b	ns	.200
IL6	.259	ns
TNFa	ns	-.177 (.081)

---

---

---

---

---

---

---

---

### Predicting Perceived Stress and Worry

Predictors	Perceived Stress Partial r	Worry Partial r
	<b>P<sub>=.000</sub>; R<sup>2</sup><sub>=.673</sub></b>	<b>P<sub>=.000</sub>; R<sup>2</sup><sub>=.360</sub></b>
Perceived stress	-	.346
Worry	.250	-
PTSD Frequency	ns	.234
Depression	.680	ns
Hurricane Exposure	.247	ns
DHEAS	ns	-.217

---

---

---

---

---

---

---

---

## Summary

- ❖ Clearly we have participants that were showing significant distress.
- ❖ There are indications that our biological measures are indicative of stress and psychological well-being but that relationship is not yet clear.
- ❖ Follow-up assessments were taken at the 1 year anniversary in September 2009, (n=295) and are currently being taken at the 2<sup>nd</sup> anniversary.
- ❖ Repeated measures across time may allow us to identify those that recover quickly, show delayed recovery, sustained distress or delayed distress.
- ❖ Goal is to test our model of moderators and mediators for negative health outcomes.
