

Table 2: ILLUSTRATIVE QUOTES

<p>Share personal experiences</p>	<p>PD49_F_G_CC: My mom passed away from cervical cancer after fighting it for 6 years.I didn't grow up with a mom around and I don't wish that for anyone. Getting a pap smear is so important..dont wait.</p> <p>PD74_F_G_Gardasil: I actually go in for my second shot in a few weeks. It's actually kind of painfull (the vaccine itself...either that or the nurse just can't give shots well), but it's well worth it.</p> <p>PD82_F_G_HPVC: I was just diagnoses with pre-cancer of cervix.HPV Caused it...But I will fight it,I have to:)</p>
<p>Provide facts about HPV</p>	<p>PD88_F_G_HPVC: even if you have HPV there is a very low chance that you have all 4 strains that the vaccine protects against so you should still get the vaccine and feel protected against the strains you do not have...</p> <p>PD49_F_G_CC: hpv is very much spread and can cause genital warts and infect millions also can be spread from your hands to your genitals if you have touch a person with warts. Skin to skin contact. Loving the support</p> <p>PD7_M_F_Humpap: The virus remains in the blood stream, but the symptoms (warts) come and go whenever and however they please... The virus can survive on any surface for hours and be picked up by the slightest contact (like toilet seats)</p>
<p>Ask questions and obtain answers</p>	<p>PD13_M_F_Humpap: Isnt HPV herpes? <i>Response 1:</i> o, not at all. HPV is Human papilloma virus. It causes genital warts...well really, almost all types of warts I believe.</p> <p>PD32_M_F_HPVC: sooo I have been reading about this... you can use a condom every time and get this and you can be infected by someone who doesn't even have visible bumps. Well that *** sucks. What is the treatment like for this?</p> <p>PD42_M_F_Gardasil: So is it possible for two people that have been just with each other catch HPV? <i>Response 1:</i> One of you could have been born with HPV. It can be passed on from the mother during delivery.</p>
