

**North and South Miami-Dade Combined
 Scope of Study for the Period: May 2008 - June 2011**

This chart combines the 4,869 unique participants from South Miami-Dade with the 1,813 unique participants from North Miami-Dade to show overall aggregate match rate for the L4H program:

*There are 101 patients who appear in the HCN download who went to an FQHC for the 1st time within a year after their screening event but may not have been properly classified as a New Patient Referral by FHRI screeners to count as a match. Including these 101 people would bring our Match Rate up to 18%.
