

North Miami-Dade Project
Scope of Study for the Period: June 2010 - June 2011

The grant period for our Living for Health North Miami-Dade program started in June 2010. By the end of one year, after 36 events, a total of 1,813 individuals were screened. From this count, 1,102 participants (61%) were referred for medical follow up, of which 567 (51%) were referred to the FQHC of the event (JTCHC or MBCHC). Trackable “New Patient Referrals” to these FQHC’s totaled 500, and of those, 13 (3%) were recognized as having gone to the referred clinic. There were 52 names that HCN was able to match from our L4H N. Dade program.

*There are 7 patients who appear in the HCN download (3 to MBCHC & 4 to JTCHC) that went to the FQHC for the 1st time within a year after their screening event but may not have been properly classified as a New Patient Referral by FHRI screeners to count as a match. Including these 7 people would bring our Match Rate up to 4%.
