

South Miami-Dade Project
Scope of Study for the Period: May 2008 - May 2011

The grant period for our Living for Health South Miami-Dade program started in May 2008. By the end of three years, after 97 events, a total of 4,869 individuals were screened. From this count, 2,906 participants (60%) were referred for medical follow up, of which 1,498 (52%) were referred to CHI. Trackable “New Patient Referrals” to CHI totaled 800, and of those, 134 (17%) were recognized as having gone to CHI. There were 713 names that HCN was able to match from our L4H S. Dade program.

*There are 94 patients who appear in the HCN download who went to CHI for the 1st time within a year after their screening event but may not have been properly classified as a New Patient Referral by FHRI screeners to count as a match. Including these 94 people would bring our Match Rate up to 26%.
