Study aims

- How do 6th grade students in low-income neighborhoods get to school?
- What are the factors that impact Active Transportation (AT: walking, biking, riding a skateboard or scooter) to school?
Childhood obesity rates remain higher in NYC low-income neighborhoods.

- East and Central Harlem, 43%
- South Bronx, 43%
- North and Central Brooklyn, 42%
- Other NYC neighborhoods 38%

(NYC FITNESSGRAM K-8th grade)
Public health context

World Health Organization: Long-term strategy for prevention and control of leading chronic diseases
Social ecological framework

- Local, state, federal policies and laws to regulate/support healthy actions
- Social networks, norms, and standards
- Rules, regulations, policies and informal structures
- Family, peers, social networks and associations
- Knowledge, attitudes, beliefs and behaviors

Structures, policies, systems

- Community
- Institutional/Organizational
- Interpersonal
- Individual

Smallest Impact
Social ecological framework & the study components

- Policy scan
  - Structures, policies, systems

- Built environment assessment

- School principal survey

- Parent focus groups

- Student survey

- Largest Impact
  - Community
  - Institutional/Organizational
  - Interpersonal
  - Individual

- Smallest Impact
Study sample

- Exclusion criteria
  - Schools
    - Without higher grade levels
    - Only one enrolled school per building
    - Receiving intensive active transportation school programming
  - Low walkability zip codes using Walk Score®, a validated measure estimating neighborhood walkability

- School sample
  - Convenience sample of 15 of 49 eligible general education schools in 6 zip codes

- Student sample
  - Classroom administered survey
  - 1,005 of 1,102 students (91%) completed survey
# 6th Grade student survey: Preliminary results

Most 6th graders in low-income neighborhoods live close to school

- All: 42%
- NC Brooklyn: 34%
- EC Harlem: 39%
- South Bronx: 59%

Number of blocks from home to school:
- 21+
- 16-20
- 11-15
- 6-10
- <=5
Usual method of travel

Travel to school
- Walk: 60%
- MTA: 24%
- Car: 14%
- School bus: 2%
- Skate: 1%
- Bike: 0%

Travel from school
- Walk: 64%
- MTA: 23%
- Car: 10%
- School bus: 2%
- Skate: 1%
- Bike: 0%
Active transportation is less likely as distance to school increases.
Less than half of students think it is safe to walk and only one-third think it is safe to bike in the school neighborhood.
Students with parental encouragement are more likely to walk to school

- Encourage to walk
- Not sure or disagree

Percent walking vs. Distance: Number of blocks
Parent focus groups: Methods

- 6 focus groups in three low-income neighborhoods (n=24)
- Separate groups for parents of children using and not using AT to get to school
- Parents were asked what influenced how their children get to school
Safety and expediency are of greatest importance to parents when making school transportation decisions.

Although parents recognize that physical activity is beneficial to children, it is often not a factor.

“We have to make sure that the path they are taking is safe... We all know that there is danger among kids themselves, among adults. And knowing that there’s nobody watching our kids from school to home... They’re on their own, that’s not right.”
Many strategies are used to keep their children safe and parents want help.

“Why do we give her a cell phone? She’s not supposed to use it in school, but she calls us when she get to school ...if something happens, I’m gonna know about it right away.”

“They have cops out here in the night, that stand, literally in front of my building....Why couldn’t they have them out there during the time when kids are coming out of school? “
Brief in-person survey with school principal or assistant principal (n=15) asking:

- School policies on walking or biking to school
- School programs encouraging walking or biking to school
- School resources
  - Storage for bikes, scooters or skateboards
  - Availability of crossing guards
  - School safety committee composition
Principal survey: Preliminary results

- More than one-quarter of principals (4 of 15) reported that they did not have any crossing guards at any school intersections.
- None of the 15 principals reported having any written policies that encouraged active transportation.
- Only 2 of 15 principals reported having an activity that encouraged walking or biking to school in the last year.
- Only 2 of 15 principals had bike racks or safe places for bikes, scooters or skateboards.
Assessed all perimeter streets and adjacent blocks to the school including:

- Signage, traffic controls, signal timing, crosswalks, curb cuts, surface, litter, pedestrian counts, and subjective assessment

Conducted in teams of 2 in the Summer/Fall of 2012

- Assessment discrepancies
- Checked and resolved in the field
Built environment assessment: Preliminary results

- Analysis underway...
Policy scan of City, State and Federal policies that may be associated with school transportation

Search included:

- City agencies (DOE, DOT, NYPD) policy search.
- Online websites (National Center for Safe Routes to School, Active Living Research, Change Lab Solutions, etc.)
- Key term searches ("school transportation"; "safe routes to school"; "school zones" etc.)
Policy scan: Preliminary results

- Safety
  - Speed limits
  - School crossing guards
  - School safety committee

- Encouragement
  - School transportation eligibility based on grade level and distance between home/school
  - School policies
  - School programming
Limitations

- Student & Principal Surveys and Focus Groups
  - Generalizability
  - Self-report
- Built Environment Assessment and Policy Scan
  - Unmeasured factors
  - Written vs. unwritten policy
Summary of preliminary results

- **6th Grade Students**
  - Most live within a distance suitable for AT
  - 60% walk but very few use other forms of AT
  - Many do not think it is safe to walk or bike
  - Distance and parental encouragement are associated with AT

- **Parents**
  - Safety and expediency are primary factors
  - Parents want help keeping children safe

- **School Principals**
  - Currently, most schools have implemented few activities or policies to encourage AT

- **Policies**
  - Identified potential policies to increase safety and/or encourage AT
