Overall Goals

- Chronic inflammation is a public health concern
- Social processes are consequential for inflammation and for disparities in inflammation

What is Inflammation?

What is Inflammation?

- Immune response to:
 - Injury
 - Infection
 - Threatening, challenging, or stressful situation
- Symptoms
 - Pain, redness, swelling, increased temperature
- Preemptive inflammatory response during times of stress
- Typically short-lived (i.e., acute)

Uchechi A. Mitchell

5

What is Chronic Inflammation?

- Persistent, low-level inflammation
- Systemic vs. localized
- Asymptomatic

Uchechi A. Mitchell

6

Determinants of Chronic Inflammation

Uchechi A. Mitchell

Determinants of Chronic Inflammation

- Age
- Adverse health behaviors
- Waist circumference, Body mass index (BMI)
- Environmental pollutants
- Psychological conditions and stress exposure (e.g., discrimination)
- Socioeconomic status (e.g., education)

Uchechi A. Mitchell

8

The Current Study

Uchechi A. Mitchell

Research Questions

1. Are there race/ethnic differences in inflammation?
2. If so, are race/ethnic differences in inflammation explained by differences in education?

Uchechi A. Mitchell

10

The Health and Retirement Study (HRS)

- Nationally representative survey of adults age 51 and older
- Biomarker and physical assessments started in 2006 with random half-sample
- Pooled data from 2006 and 2008
- N = 11,935

Key Variables

- Race/Ethnicity
 - African American
 - Hispanic
 - Non-Hispanic White (ref.)
- C-reactive protein (CRP)
 - General marker of inflammation
 - Log-transformed
- Education (years)

Additional Covariates

- Demographic characteristics
 - Age (years)
 - Gender (ref. = males)
 - Marital status (married, separated/divorced, widowed, never)
- Socioeconomic factors
 - Household income (log-transformed)
 - Employment status (employed, retired, other)
- Health behaviors
 - Smoking (never, former, current)
 - Alcohol (non-drinker, moderate, heavy)
 - Physical activity (no activity, $\leq 1/\text{week}$, $> 1/\text{week}$)
 - Vigorous and moderate
- Health status
 - Waist circumference (inches)
 - Body Mass Index; BMI (kg/m^2)
 - Depressive symptoms; CES-D (range: 0-8)

Analytical Procedures

- Nested linear regression models
 1. Race/Ethnicity, Gender, Age, Marital Status
 2. ... + Education
 3. ... + Income, Employment Status
 4. ... + Health Behaviors
 5. ... + BMI, Waist, Depressive Symptoms

Study Findings

Uchechi A. Mitchell

**Table 1 - Select Characteristics of the Sample
(n=11,935)**

	<u>Mean (SD) or %</u>
Race (%)	
Non-Hispanic white	77.6
African American	13.1
Hispanic	8.3
Gender (%)	
Male	41.6
Female	58.4
Age (years)	69.2 (9.6)
Education (years)	12.5 (3.14)
Household income (\$, thousands)	62.7 (162.6)
Waist Circumference (inches)	39.3 (6.0)
Lifetime Discrimination (range: 0-6)	0.5 (0.9)
Everyday Discrimination (range: 0-5)	0.6 (0.7)

Uchechi A. Mitchell

16

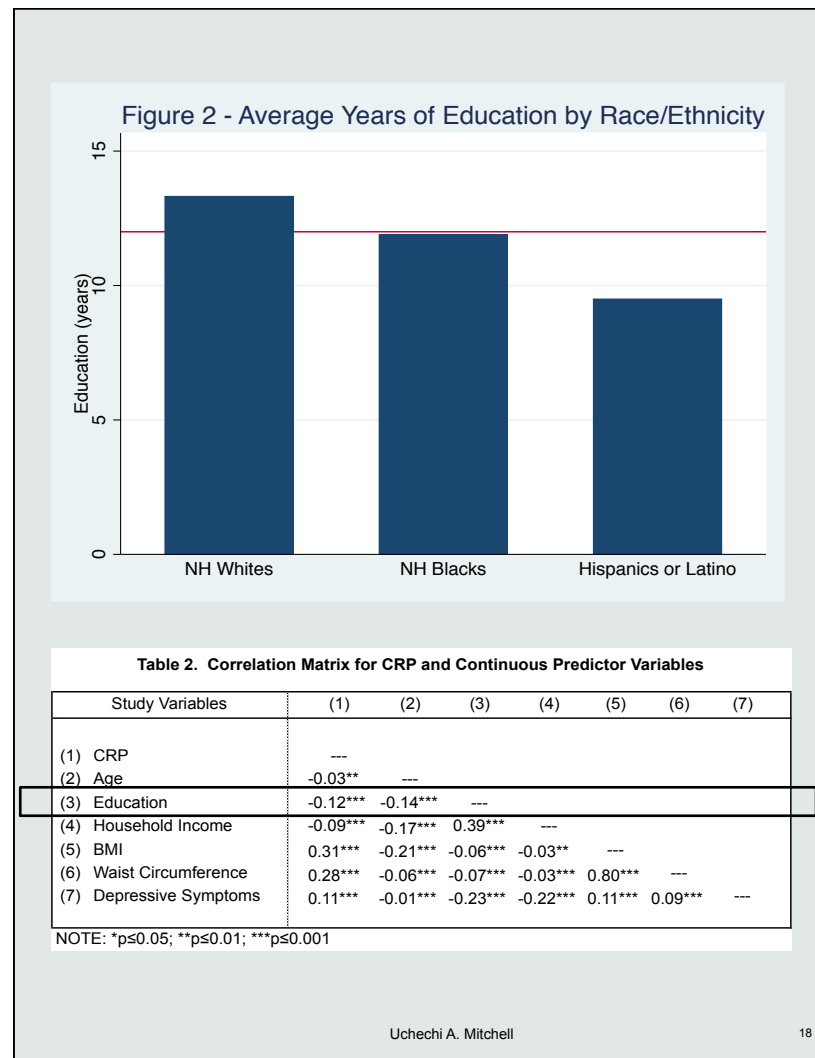

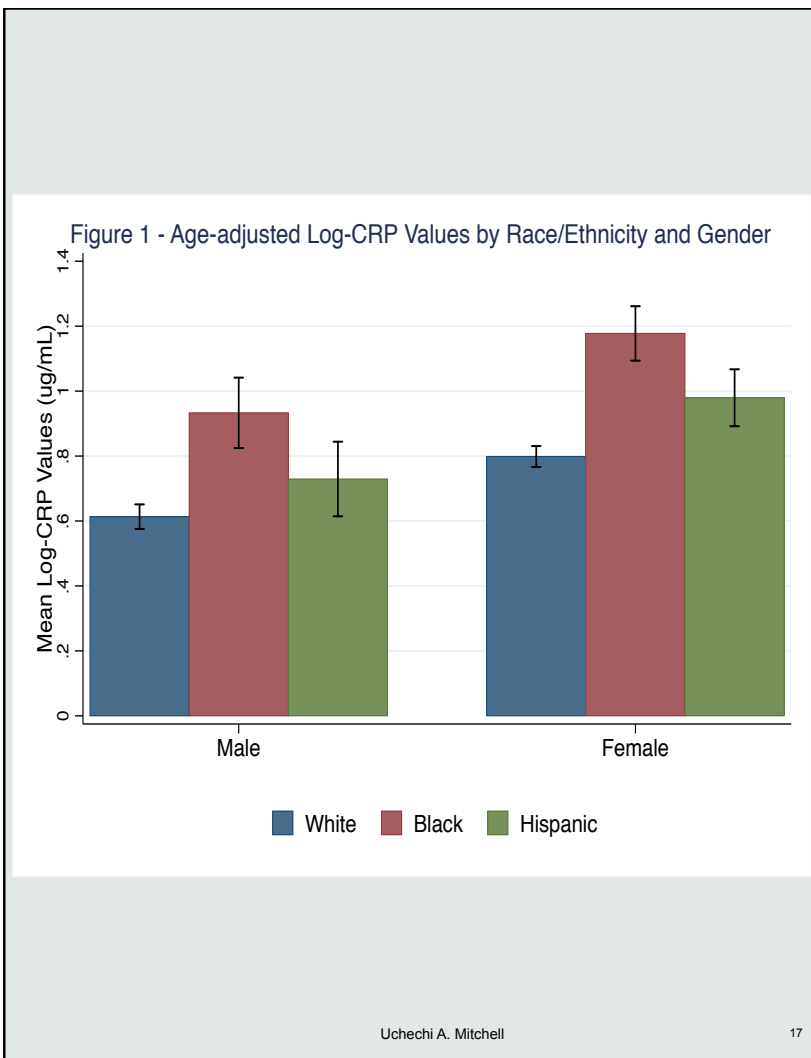

Table 2 – Regression of Inflammation on Discrimination and Select Variables (n=11,935), Weighted

	<u>Model 1</u>	<u>Model 2</u>	<u>Model 3</u>	<u>Model 4</u>	<u>Model 5</u>
Race/Ethnicity (ref. White)					
Black	0.309***	0.231***	0.217***	0.195***	0.120**
Hispanic	0.140**	-0.072	-0.085	-0.034	-0.017
Gender (ref. Male)	0.213***	0.200***	0.186***	0.178***	0.338***
Education (years)		-0.053***	-0.048***	-0.034***	-0.023***
Household Income (log)			-0.019	-0.0004	0.002
Current Smoking				0.293***	0.412***
Waist Circumference (inches)					0.041***

*p < 0.05, **p < 0.01, ***p < 0.001

Model 1: race/ethnicity, gender, marital status
 Model 3: + household income, employment
 Model 5: + health factors

Model 2: + education
 Model 4: + behaviors

Conclusion

Conclusion

- **Limitations**
 - Subjectivity of SEM
 - Didn't test behavioral pathways
- **Strengths**
 - Large, representative sample
 - Formal mediation analysis
 - Incorporates a measured biological marker
- **Public Health Implications**
 - Understanding of health disparities
 - Link social environment to biomarkers

Thank You
