“No relationships to disclose”
Chronic Disease Burden

- 100 million Americans currently suffer from a chronic disease (coronary heart disease, stroke, high blood pressure, Type 2 diabetes, and mental health conditions)

- Overweight and obesity contribute to chronic disease

- Chronic disease results in decreased quality of life and, ultimately, in premature death.

- Spending time in natural environments increases physical activity, hence decreases the risk of obesity.
DC Park Rx is a Community Health Initiative whose mission is to prescribe parks to prevent and treat chronic disease and promote wellness.
What have we accomplished?

• Developed standardized park rating tool
• Recruited volunteers/students to rate parks
• Mapped and rated >300 parks
• Developed **Park Pages** searchable database linked to EMR
• **DC Park Rx** launched at Unity Health Care on 7-1-13 (>829 Rx prescribed) by 66 of 180 providers
• Researched changes in behavior and attitude

PARK EXTRAS: Benches, picnic tables, and trash cans. Employee present and educational programs available.
AESTHETICS: The park is very sunny with mild street noise.
SPECIAL FEATURES: Water sprinkler spray park- fun for kids in the summer!
Results of Park Rx Research:

1. increase in the number of children who visit a public park in DC

2. increase in the number of parents who believe that physical activity affects the health of their child

3. increase in the number of parents who said their provider discussed the importance of physical activity

4. increase in the number of parents who said their provider recommends their child spend time at parks

5. 22 more minutes per week on physical activity

6. 6 more days per year at a park for at least 30 minutes
Why are these results relevant?

DC Park Rx is a low-cost intervention that utilizes a known, generally trusted, and accessible resource – parks – to influence positive health outcomes by way of the provider-patient relationship in the health care setting.
Next steps…

- Programmatic expansion
- Enhancement of search functionality of database
- Creation of app for handheld devices
- Research of biometrics
