RECOVERY IS

HOPE, CHOICE, AND COLLABORATION ARE ESSENTIAL.

From the APHA Policy Statement: Support for Social Determinants of Behavioral Health and Pathways for Integrated and Better Public Health, November 18, 2014

Behavioral health is an essential component of overall health and well-being.

Research on the social determinants of behavioral health, along with increasing acknowledgment of the evidence by policymakers, provides a basis for public health strategies to improve the nation's behavioral health.

People with serious mental health conditions die earlier than people without these conditions. The leading cause of the decreased longevity was not the behavioral health condition, but common and often preventable conditions, particularly cardiovascular, pulmonary, and metabolic disorders.²

PEOPLE RECOVER FROM BEHAVIORAL HEALTH CONDITIONS. HOW?

Access to Treatment and Services

- Welcome
- Attention to preventable causes of illness
- Engagement/Activation
- Health Literacy

Housing

- Safety
- **Clean Environment**
- Nutrition

Recovery-oriented care is not a new model, it is about fundamentally doing differently what we do every day

A 2014 report from the American Academy of Family Physicians noted that one-half of primary care patients have a behavioral condition that is significantly disabling. Behavioral health is integral to overall health.¹

- Social and community networks
- Inclusion
- Social Support
- Positive role models

Self Determination

- Work/Economic security
- Education
- Spirituality
- Creative expression
- Intellectual pursuits

Social Determinants are the cultural, social, economic, health, and environmental conditions at the national, regional, community, and family levels that influence one's health, wellness, and recovery from physical and behavioral health conditions.

A 2006 U.S. study found similar results and emphasized the critical impact of social determinates of behavioral health on this reduced longevity: poverty, homelessness, unemployment, side effects of psychotropic medications, social isolation, trauma and discrimination.³

KITs

Recovery to Practice [RTP] offers 6 discipline-specific curriculum to help build the recovery practice skills of your integrated and multidisciplinary workforce. These curriculum are supplemented by virtual training events and technical assistance.

³ Parks J., Svendsen D., Singer P. and Foti M. (2006) Morbidity and Mortality in People with Serious Mental Illness. National Association of State Mental Health Program Directors (NASMHPD) Medical Directors Council, Alexandria, VA 22314. Available at: www.nasmhpd.org/ general_files/publications/med_directors_pubs/Technical%20Report%20on%20Morbidity%20and%20Mortaility%20-%20Final%2011-06. pdf(accessed17March2010).

What YOU can do:

Use RTP to help you build workforce knowledge and skills in recovery-oriented practices that have been shown to be effective in helping people recover their full potential

Promote positive social determinants of health and recovery

- Act to end discrimination and pessimism in behavioral health prognosis
- Spot the impact of trauma: emotional, physical, environmental, refugee
- Use welcoming approaches and model inclusion
- Attend to choice and self-determination
- Collaborate as partners in care; use person-centered planning
- Promote and support self-care activities
- Practice shared decision making
- Respect and value peer-delivered services
- Address social determinates of health drawing from SAMHSA evidence based practices KITS: http://store. samhsa.gov/list/series?name=Evidence-Based-Practices-
